Woolpower[®]
ÖSTERSUND

OUTDOOR
2023/24

WE DON'T SELL NEWS

Our product range has, to a great extent, been the same for over 50 years. It's a conscious choice.

For us, it's not about creating new collections every season or even every year. We believe that the most sustainable garment is the one you can use year after year. Therefore we make products that can last a life time - in looks and in durability.

Our product development focus is to create products that fulfil a clear purpose and to improve our existing products with quality and sustainability as our guiding principles.

Having product development and production under one roof puts us in a great position to develop products optimised for sustainable production.

WOOLPOWER

QUALITY IN EVERY SENSE

Woolpower is living proof that a clothing company can provide reasonable salaries, safe employment and a working environment that people enjoy being in. Ever since our factory opened in Östersund all our garments have been sewn here. That's how we want it to be so that we can maintain the highest quality possible.

CIRCULAR KNITTING

Each year, around 200 tons of Merino wool yarn is delivered to the factory in Östersund. This is where the knitting starts. When we make our Woolpower garments we use circular knitting machines to produce the sleeves, legs, body and socks. Using this technology means that garments have a minimal amount of seams for the best durability and comfort.

OUR EXPERIENCED SEAMSTRESSES

At Woolpower, one seamstress is responsible for sewing an entire garment, from the very first to the very last stitch. This makes the work more varied and develops their workmanship. Once the seamstress completes a garment and approves it, a label with their name, is attached to it. This label is the seamstress and Woolpower's – seal of quality.

A WARM COMPANY

You could say that warmth is our thing in every sense of the word. We make warm woolen products, and we also aim to be a warm company that takes good care of its employees, partners, animals and the environment.

SUSTAINABILITY

Having our own factory in Östersund gives us a great opportunity to work on our environmental footprint. During recent years we've taken another important step towards our sustainability goals. For example, we only use renewable electricity and waste fabric from our production line gets recycled into our popular Felt Insoles and our Sit pads in three sizes. Our production is certified in accordance with ISO standards. The garments made of Ullfrotté Original fabric is certified according to STANDARD 100 by OEKOTEX®, a globally standardized independent mark of quality for textile products tested for harmful substances.

NAME: Karin Andersson
OCCUPATION: Team Leader, knitting operations and material handling

Karin has worked at Woolpower since March 2020

"My colleagues are the best thing about my job. We are a strong team that always lends a hand. No two days look the same, and there is always something new going on. I have loads of fun with them, and we laugh every day!

Woolpower is a very welcoming company, I felt that right away when I started, and I still have that feeling. It's cool to see that everyone helps each other out when necessary. Regardless of your position in the company."

ULLFROTTÉ ORIGINAL

INVENTED TO LAST

The unique Ullfrotté Original material was developed for the Swedish military, together with other specialists such as doctors and scientists as early as the early 1970s. The result was a garment with great insulation properties and unique moisture management. It's a wear-resistant fabric that actually makes you feel warm and dry even when moist.

SYNTHETICS ADD STRENGTH

Merino wool is a material that has excellent temperature regulation properties, but its wear resistance is not optimal. To bolster Ullfrotté Original's wear resistance, the Merino wool is mixed with one-third synthetics. This gives the garment the strength needed to meet the high-quality standards of Woolpower, without taking any of the excellent properties of the wool away.

TERRY LOOPS TRAP THE AIR

Ullfrotté Original is knit so that one side of the fabric is flat and the other has smooth terry loops. It is the terry loops in combination with the loose knit wool fibres that make our garments capable of trapping such a great amount of air. Up to 80 percent of Ullfrotté Original actually consists of air. The terry surface also offers the benefit of wicking moisture away from the skin.

WASH LESS OFTEN

Wool, is easy to take care of and doesn't smell bad. The ability of wool fibre to absorb and neutralise bad odours is far superior to other textile materials. This means that you do not have to clean your Ullfrotté garments that often. Simply hanging them outside for a bit can be enough. However if needed Woolpower garments can be machine washed at 60 °C (140 °F)*. They can also be tumble-dried at medium heat but as with all clothes this shortens the lifespan of the garment. When you wash your clothes, you can use Woolcare, our own washing detergent for wool. It's a gentle detergent that contains lanolin, the natural fat found in wool, which helps to nurture the fine qualities of wool. You can also use a normal detergent, or just wash with water.

Ullfrotté
ORIGINAL

MERINO WOOL

A REMARKABLE MATERIAL

Temperature regulation is one of the most important functions in comfortable underwear. Wool has remarkable characteristics that no science lab has yet been able to replicate synthetically. In all Woolpower garments we use Merino wool, a perfect fibre to insulate against both heat and cold.

TOGETHER WITH OUR SUPPLIERS

We purchase our Merino wool from the Uruguay and the Argentinian part of Patagonia. There, we have a constant dialogue with our suppliers about animal treatment and the sheep farmers' impact on the environment. Of course, we only use guaranteed mulesing-free wool.

WOOL FOR INSULATION

Merino wool is the perfect material to use when you want to stay warm. The secret is in the air, the more air you can trap around the body, the more heat you can retain. And the crimp structure of the wool fibre traps large quantities of air. Merino wool has up to 40 creases per centimetre, which provides a remarkably high degree of insulation.

WARM EVEN WHEN MOIST

The natural wool fibre also works together with your body when you get wet. Wool can absorb up to 30 percent of its dry weight in moisture without feeling damp. So it keeps you warm – and it also transports moisture away so that you feel warm and dry for longer.

NON-ITCHY THICKNESS

The Merino wool used in our own Ullfrotté Original material is 22,5 micron. Due to the terry loops on the inside, the amount of contact zones are very few. 22,5 micron is therefore thin enough to give a comfortable, non-itchy material, but thick enough not to break easily. Our rib knitted LITE material is made from wool fibres with a thickness of 19,5 micron. Due to rib knitted material having more contact with the skin, this thinner fibre is required to remain comfortable and non-itchy.

CLOTHES DON'T PROVIDE HEAT

BUT YOUR BODY DOES

A SYSTEM FOR HEAT REGULATION

When the weather is cold, the best way to stay warm is by following our layering system. Layered clothes help you retain your body heat since the layers bind more air and therefore create more insulation. At the same time, the layers transport away the moisture and excess heat that your body doesn't need. By using the layering system, it's easy for you to adjust your clothing based on your activity level at any moment. More layers for low activity, fewer layers for high activity.

CHOOSE THE RIGHT THICKNESS

Woolpower has developed an entire collection of garments for the whole body that can be combined differently depending on the temperature and form of activity. Our garments are produced in varying thicknesses for different functionality and benefits. Our base layer materials are LITE and Ullfrotté 200. Our mid layer materials are Ullfrotté 400 and Ullfrotté 600.

600

400

200

LITE

INSULATION SCALE

ULLFROTTÉ 600 - MID LAYER

The thickest of our terry-knitted mid layers is called Ullfrotté 600.

ULLFROTTÉ 400 - MID LAYER

Ullfrotté 400 is a terry-knit mid layer that creates extra insulation.

ULLFROTTÉ 200 - BASE LAYER

Ullfrotté 200 is a terry-knit base layer that traps a lot of air, making it warmer than LITE.

LITE - BASE LAYER

LITE is a flat-stitched fabric, which makes it cooler than Ullfrotté.

WOOLPOWER LAYER SYSTEM

1

LITE OR ULLFROTTÉ 200 FOR UNDERWEAR

Start with a heat-insulating and moisture-transporting undergarment closest to your body.

The base layer keeps your body at just the right temperature and also helps remove moisture at the same time.

All Woolpower's Ullfrotté 200 garments are circular knit, which means they don't have any uncomfortable seams that can chafe and break.

The LITE fabric is flat-knitted which gives more direct contact against the skin than Woolpower's Ullfrotté Original fabric. That means that heat is conducted more easily from the skin and out through the garment. LITE products are perfect as a cooler alternative.

2

ULLFROTTÉ 400-600 FOR INSULATION

Add one of Woolpower's Ullfrotté garments as a mid layer to increase insulation between the base layer undergarment and your wind and water resistant outer layer.

Ullfrotté gives you excellent insulation and both Ullfrotté 400 and Ullfrotté 600 are round-knitted without seams. These mid layer garments are often used in colder temperatures and at less strenuous activity levels.

3

Layer 3 should be a wind and water resistant outer shell that protects you against external cooling and keeps your heat trapped between the base and mid layers.

4

A wind-proof outer layer made with down or a synthetic insulator is easy to put on and take off over your shell. It's useful for breaks.

Woolpower
ÖSTERSUND

PRODUCTS THAT LAST

Creating timeless and extremely functional garments of high-quality is the cornerstone of our business model.

True to our product philosophy, we strive to meet the following criteria when developing or creating new products:

- Garments produced must have a clear purpose and the best possible function based on their intended use. We manufacture high-quality products where function always prevails over fashion.
- The materials selected must be suitable for creating products with high durability, at the same time as they have as little impact on the environment as possible.
- Garments must be manufactured with respect for the environment and the people producing them. Sustainability and responsibility are of great importance to us throughout all parts of our production.
- The garments we produce must be designed and constructed for efficient and cost-effective production.

WOOLPOWER

ULLFROTTÉ

200-800

SOCKS

The continued experience and deep knowledge about how important it is to have dry and warm feet is reflected in our wide range of products.

Keeping your feet warm and dry is essential to staying comfortable. Whatever your needs, Woolpower's sock range keeps your feet in the best shape possible, all year around.

Woolpower makes socks using our terryknit fabric Ullfrotté 200-800 and our flat-knit fabric LITE. Both knitting techniques create fabrics that provide excellent insulating functionality and retain warmth even when wet. The fabrics absorb and move perspiration away from the skin while still keeping you warm. They also contain polyamide, which increases shape stability and durability.

WOOLPOWER

SKILLED

SOCKS

Since 1969 when the Woolpower company opened its doors for the first time, we have always aimed to make progress without compromising quality or sustainable production.

As we've made progress we have learned a lot about ourselves, and about how to adapt the thickness of our fabrics to suit our environment. Ullfrotté Original and LITE are our best fabric compositions and we have chosen to combine them.

Together with our users, who have worn and tested Woolpower's products year after year, we have developed our most advanced functional socks: Skilled Socks.

The socks are available in two thicknesses and in several lengths. They are built with multiple panels that are adapted to the shape of the foot and external wear and tear.

Skilled Socks pad the foot and soften your steps. They are designed to prevent blisters, for example from the lacing on a shoe. When you move, Skilled Socks seal around your foot and stay in place.

WOOLPOWER

LITE

BASE LAYER

WOOLPOWER LITE is a fabric that has exploded in popularity since we started producing it a decade ago. LITE is a thinner fabric that is good to use all year round. It feels cool against the skin during warmer weather and warms the body when the cold creeps in. It is also an excellent base layer to wear underneath our thicker clothes in Ullfrotté Original.

The LITE fabric is 1:1 rib-knitted tricot which allows for more direct contact with the skin than Woolpower's Ullfrotté Original fabric. That means heat is transported more easily from the skin and out through the garment. This in turn makes the LITE products perfect as a cooler alternative, for highlevel activity and/or warmer temperatures. Woolpower LITE stretches the season for Woolpower garments, and can be used all year around. A 19.5-micron merino wool is combined with 20% polyamide fibre to create a stronger and more durable garment. Functionality remains the primary focus. There are no more seams than absolutely necessary and the fabric is a very soft, smooth and stretchy 1:1 rib-knitted tricot.

LITE still provides insulation, but more importantly its merino wool adapts to temperature and activity levels.

WOOLPOWER

ULLFROTTÉ

200

BASE LAYER

THIS IS OUR thinnest undergarment in terry-knit Ullfrotté Original. Every garment is made from different sizes of tubes, which means that we have minimized the amount of seams. This creates a garment that is more durable and with less chafing from seams.

The garment is designed to be worn next to the skin as a moisture wicking base layer. The terry loops and the overall loose knitting gives unique insulation compared to the fabric weight.

By wearing the Ullfrotté 200 base layer closest to the body you will benefit from all the best functions terry loop wool garments provide: insulation, perspiration transport and comfort. It is also great in combination with Woolpower LITE.

Mittens Thin are made from single layered terry knit fabric and are excellent as warmer liners for mittens. The seam is on the outside.

M - L

MITTENS 400

Art no: 9754

Mittens are made from double layered terry knit fabric for optimal insulation and are excellent as warmer liners for shell mittens.

M - L

BELLY WARMER 200

Art no: 9512

Belly warmer for pregnant women that has an elastic upper edge and no lengthwise seams. It is made from Ullfrotté 200 with a smooth surface on the outside and terry loops on the inside.

ONE SIZE

WRIST GAITER 200

Art no: 9672

Wrist gaiter with thumb hole, made from circular knit fabric with terry loops on the inside. It has the Woolpower logo knitted in and is 18 cm long.

ONE SIZE

FELT INSOLES

Art. no 5715

Felt Insoles made of production waste from fabric in various colours. The high wool content gives good insulation and moisture management properties. The colour differs depending on what waste fabric that has been used but will be predominantly grey.

36 - 37 | 38 - 39 | 40 - 41 | 42 - 43 | 44 - 45 | 46 - 47

COLOUR: Recycle Grey

SIT PAD

Art. no: 9785

Sit pads made of the recycled Merino wool from our own production waste. The colour can vary depending on the different colours of the clothes, but will be predominantly grey. The Woolpower logo is sewn in as a label with text on the other side. Available in three sizes.

COLOUR: Recycle Grey

WOOLCARE

Art. no 10490000

A Woolwash gentle to both the environment and your clothes. It contains no enzymes and only low impact renewable surfactants. The woolen garment will be clean and long lasting. It also contains the natural wool fat lanolin to protect the delicate fibres of wool.

500 ml = 20 washes.
